Notes:

Arrived on location at 14:33 6/26/14.

Site has impacted a nearby wetland with approximately <1 bbl of oil. The site was also tested for chlorides, with the wetland measuring out at 800 ppm on a quantlab test strip.

Company personnel were asked to be on location the morning of 6/27/14 to examine the site and discuss what needs to be done for proper cleanup of the location.

More followup is necessary to ensure proper cleanup.

Notes:

Arrived on location at 10:00 6/27/14.

Met with Murex Petroleum personnel at the location to discuss what needs to be done to ensure proper cleanup.

The current plan of action is to manually cut out the impacted vegetation with hand tools and properly dispose of the debris. The next action plan was to build small dikes in the area to essentially isolate the impacted water from the rest of the wetland and use a vac truck to remove the small areas of impacted water.

Murex Petroleum has been directed to hold off on removing any soil and bringing in any heavy equipment until it is determined that there are no wetland easements in place on the land.

Murex Petroleum has been given till the week of July 7 to properly remediate the site and has been issued a verbal warning that this site may go to a notice of violation.

Further testing of this location is necessary to determine the full extent of the impact. More followup is necessary to determine proper cleanup.

Updated Other Contaminant

Notes:

Phone contact with Murex personnel to inform them there is not a U.S. Fish & Wildlife Service easement on the location.

Murex said work has been slowed in the area due to recent heavy rains at the site.
