

Oil Field Environmental Incident Summary

Incident: 20150306132615 **Date/Time of Notice:** 03/06/2015 13:26

Responsible Party: Golden Eagle Trucking,inc.

Well Operator: RIM OPERATING, INC.

Well Name: BOSS 12-17

Field Name: STOCKYARD CREEK

Well File #: 14792

Date Incident: 3/4/2015 **Time Incident:** 04:00

Facility ID Number:

County: WILLIAMS

Twp: 154

Rng: 99

Sec: 17

Qtr: SW NW

Location Description: Spill originates on Boss 12-17 well site, then ran down road and ditch to the south east off of well site.

Submitted By: Jon Putnam

Contact Person: Waylon Olsen
5 INVERNESS DRIVE EAST
ENGLEWOOD, CO 80112

General Land Use: Well/Facility Site

Affected Medium: Well/Facility Soil

Distance Nearest Occupied Building:

Distance Nearest Water Well:

Type of Incident: Truck Overflow

Release Contained in Dike: No

Reported to NRC: Unknown

	Spilled	Units	Recovered	Units	Followup	Units
Oil						
Brine	40	Barrels	10	Barrels		
Other						

Description of Other Released Contaminant:

Inspected:

Written Report Received:

Clean Up Concluded:

Risk Evaluation:

No immediate risk.

Areal Extent:

Potential Environmental Impacts:

Soil in coulee absorbed the salt water.

Action Taken or Planned:

Sucked up surface liquid. We will have to excavate top soil and dispose of material. Placed absorbent bouies in coulee.

Wastes Disposal Location: Closest solids disposal site.

Updated Oil Volume:

Updated Salt Water Volume:

Updated Other Volume:

Updated Other Contaminant

Notes:

3/9/2015 at 11:55, on location. Oil staining visible next to tank battery on top of hill in flow path release took toward the creek; however, no oil staining visible on hill slope or at bottom next to creek.

According to report contact, at time of release the spill had not reached the creek. However, with recent meltwater the creek has risen and has inundated the impacted area.

Excavator is on site, and it appears some scraping of spill endpoint has been performed.

EC readings:

Upstream of impact location next to lease road culvert, within the flow: 381 uS

Adjacent to spill endpoint on upstream side in still water: 313 uS

Adjacent to spill endpoint on downstream side in still water: 1341 uS

Downstream of spill endpoint along creek: all readings <350 uS

Quantab on water with the 1341 uS EC reading = 55 ppm

Meeting with report contact tomorrow to discuss further work.

Updated Oil Volume:

Updated Salt Water Volume:

Updated Other Volume:

Updated Other Contaminant

Notes:

Arrived on site at 6:25 p.m. Weather was overcast with wind out of the SW at 5 mph and temperature of 81 degrees F. Vegetation has not yet established in a 3-foot wide by 10-foot long area SE of the access road ditch. Background electrical conductivity (EC) reading was 217 microsiemens (uS). In the area of impact, the EC reading was 976 microsiemens (uS). Very little vegetated growth occurring in the area. Additional follow-up needed.

Updated Other Volume:

Updated Other Contaminant

Notes:

Arrived on site at 10:01 a.m. Weather was overcast with wind out of the west at 35 mph. Temperature was 34 degrees F. The area of impact is located SE of the pad and west of the access road. The vegetation has grown, and there was no bare soil visible in the area. Can see where one small area of soil was replanted and has reestablished during this past couple of months.
