Updated Other Contaminant

Notes:

Arrived on site at 11:20 a.m. 39 degrees F, wind 5-10 mph. Walked perimeter of site and took pictures. No visual contamination was present on or off site of this location. However, further inspection of area sites found that this well location is linked to a nearby pipeline repair. Two other incidents also fit the description (same spill location with multiple incidents). They are as follows:

Incident Number 20160204150211 - Walter 11-1SHH

Incident Number 20160301095727 - Eagon 31-1SH - closest to actual spill location

For record-keeping purposes. I will update these incidents as recorded in my notes and will check with the Spill Response Program manager to see which sites he would like to close.

Updated Other Contaminant

Notes:

Visited the site. All vegetation in the area looked good. The disturbed area NW of the well pad is due to pipeline construction and not the release. No further action is warranted.
