Proposed North Dakota Food Code Changes

The North Dakota Department of Health, Division of Food and Lodging, recognizes the U.S. Food and Drug Administration (FDA) model Food Code as the most practical, science-based guidance for ensuring that food offered at retail and in food service is safe, unadulterated and honestly presented.

This summary provides a list of changes from the 2012 North Dakota Food Code to the 2013 FDA Food Code (proposed adoption by reference). The primary intent of this document is to provide a synopsis of the major changes to the Food Code and should not be relied upon as an absolute comparison that identifies each and every change. Section and paragraph numbers listed refer to the 2013 FDA Code. To view the complete Code, visit www.fda.gov/.

Chapter 1 Purpose and Definitions

Added “Core Item”, “Priority Item”, and “Priority Foundation Item”

Amended “**Packaged**” in (1) to delete the term “securely” to avoid undue emphasis on nature of the package; Amended “**Packaged**” in (2) to remove the phrase “or other nondurable container” to clarify when foods packaged at retail need to be labeled so that it reads: “**Packaged**” does not include wrapped or placed in a carry-out container to protect the food during service or delivery to the consumer, by a food employee, upon consumer request.

Deleted “**Enterohemorrhagic Escherichia coli**” (**EHEC**) as use of EHEC terminology is outdated.

Deleted the term **Potentially Hazardous Food (Time/Temperature Control for Safety Food)**” (**PHF/TCS**) and made a universal change throughout the Code to replace it with the term “**Time/Temperature Control for Safety Food**” (**TCS**). The definition remains the same.

Revised “**Reduced Oxygen Packaging**” subparagraph (2)(e), to delete the phrase “placed in a hermetically sealed, impermeable bag” and replace it with “vacuum packaged in an impermeable bag” so it clearly defines the sous vide process as outlined in Annex 6(2)(B)(4)(b). It now reads: “Sous vide packaging, in which raw or partially cooked food is vacuum packaged in an impermeable bag, cooked in the bag, rapidly chilled, and refrigerated at temperatures that inhibit the growth of psychotropic pathogens.”

Revised “**Shiga toxin-producing Escherichia coli**” (**STEC**) to reflect current nomenclature.
