

The following charts are based on the total number of incidents reported to the Oil & Gas Division from 11/1/2012 – 11/11/2013, which is 1696. Please note that some incidents filed more than one contaminant released so, depending on the chart, the sum of the individual columns may not necessarily add up to the total.

### Number of Incidents by County

\*Contained releases are those which remain within the boundaries of the production or exploration facility

\*\* Not contained releases are those which overflow the boundaries of the facility or leak from a facility pipeline
